We are pleased to announce that the feature on our website which says who is coming, what they mean to bring, and what they hope someone else will bring has been de-zombied. We formerly had trouble with it not resetting after the meetings each month, so no one could rely on anything they saw there unless it happened to contain a date.

Well, it now works properly (AND says when you're coming even if you don't say you'll bring anything!) -- but since everyone kind of gave up on it over the last few months, as I write this only three people have filled it out for the coming meeting. Please take a moment to fill in your RSVP for March!

I guess this command line TOS program (TTP) does not have any
sophisticated options. Just try to give 2 parameters, first is an ATR
image filename, second is a XFD image filename.

Regards
Peter

# 6066. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2012-03-25 15:00:05 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4F6F32F5.9060908@atari.org>
Source record: 434

Hi,

ARAnyM <http://aranym.org/> is the GNU/GPL ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is modified with
the new release of ARAnyM v0.9.13. It supports :

`Run_win` allows launching on PC with Windows
`MacAranym` allows launching on PPC Macintosh with OSX
`MacAranym JIT` allows launching on IntelMac with OSX
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh-PC-PlayStation3 are all supported with Windows,
Mac OSX and GNU/Linux.

This simple ARAnyM configuration is running on any machine.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

# 6068. Spacebar hack

Newsgroup: comp.sys.atari.st
Date: 2012-03-26 15:48:32 UTC
From: Doug Mccomber <doug.mccomber@theville.vintagecomputing.net.remove-2ih-this>
Message-ID: <4F70BA00.480.cmpsysst@theville.vintagecomputing.net>
Source record: 436

Hi,

The spacebar on my Mega ST keyboard sticks sometimes on the left side. I took it apart to clean it and of course noticed that it only has a single centre-mounted spring. Cleaning helped but the issue is still there so I was thinking about adding a spring on the left and right sides. Has anyone done this?

Regards,
Doug

Hi Doug. It's not just the Mega's - every ST keyboard I've took apart has only had a single in there. I've not had my STacy's keyboard apart though.

Whenever I've used the "TT Touch" keyboard upgrade from Best Electronics, I always fill out the space bar on regular ST's. Makes it much more stable IMHO.

I'd say with springs, go for it - you can always take them back out if you don't like the way it feels or it just won't work.

As far as I can tell, the power supply on the Mega ST4 that runs my BBS
is out.

I'll order a new one from Best Electronics, but the BBS will probably be
down for a few days...

Apologies!

# 6080. GEMClip version 1.01

Newsgroup: comp.sys.atari.st
Date: 2012-04-11 21:41:12 UTC
From: Jean-François Lemaire <jflemaire@skynet.be>
Message-ID: <4f85fa68$0$3107$ba620e4c@news.skynet.be>
Source record: 448

Hello,

I'm releasing GEMClip version 1.01

This is a very small update to version 1.0, that fixes one bug that made the accessory non-functional under MagiC. So if the program works for you, you don't need to update, nothing else has changed.

Thanks to Peter A. West who reported the issue and helped debug it.

Presentation page:
http://www.gemdict.org/gemclip

Many thanks, and greetings for this beautiful publication. I'm on the
way of building my softwares with these cross-developing tools. This
is hard work (10 years !), but very useful job for developers like me.

Keep going !

Regards,

I have one, and maybe 2, falcons for sale.

1 is mounted in a DeskTopper case, with a 3gb hard drive, and 14mb memory.

The second one is being repaired. If it cannot be repaired, then I will sell the parts.

Anyone, in North America, interested, drop me an email with any questions you may have.

Thanks!

# 6087. unlocked software from Mountain Software

Newsgroup: comp.sys.atari.st
Date: 2012-04-20 17:53:49 UTC
From: Doug Mccomber <doug.mccomber@theville.vintagecomputing.net.remove-w8q-this>
Message-ID: <4F91CCDD.496.cmpsysst@theville.vintagecomputing.net>
Source record: 455

Hi everyone,

I have some great news from Mountain Software. I contacted them about registering Mountain Reader II and Anthony Watson wrote back sending me an attachment with an unlocked copy of all his ST software. Naturally I then asked him if he'd mind if I shared it with the Atari community. Here is his reply:

Quote

Sure, that would be fine. Just understand I am no longer supporting those applications, though I would still enjoy hearing from anyone who uses them. ┬ál would also appreciate if you could include links to my current web sites:

www.homecookinrecipesoftware.com
www.mountain-software.com

Unquote

So I have done as he asked here and in FILE_ID.DIZ files. The programs have been uploaded to my bbs (Files->Atari ST->Communications and Applications) and the Darkforce bbs (Files->Telecommunications and General). You don't need to register an account with my bbs to download the files (not sure about Darkforce). Telnet to theville.vintagecomputing.net or darkforce-bbs.dyndns.org

Mountain Reader II is in the file m_reader.zip

The Recipe Box is in the file recipe.zip

Mountain Software Shareware Bundle is in the file bundle.zip and contains the following programs:

TUZZLE.TOS
NUMBERS.TOS
EZ_MONEY.TOS
MTN_VIEW.TOS
MANUAL.TOS
PEN_PAL.TOS
MOVIES.TOS
EZ_BASE.TOS
EASY_GO.TOS

If you re-distribute these files please respect Anthony Watson's wishes and include the quote and links. On behalf of the Atari community I want to publicly thank Mr. Watson for sharing his work with us. It is always greatly appreciated when an author from the glory days of the ST shares their software with current Atari faithful.

Regards,
Doug

# 6088. Structure of .ST files

Newsgroup: comp.sys.atari.st
Date: 2012-04-21 11:37:27 UTC
From: Paolo <pppaolo@email.it>
Message-ID: <cd0144b1-c82c-4e94-8d33-60a931403558@c28g2000vbu.googlegroups.com>
Source record: 456

Please, what is the structure of a .ST file emulating an Atari ST
floppy disk?
It gets 738.260 B versus 726.016 on the FD.
Thanks
Paul

A standard floopy has:
80 tracks with 9 sectors of 512 bytes on each side, so it is a total of:
80*9*2*512 = 737 280 bytes.

Some sectors are reserved for boot + FAT, so you only get 726 016 bytes
available for storage.

738260 - 737280 = 980 bytes added.
Well, I can't say more in this organisation of those 980 bytes.

Guillaume.

Hi Doug. Thanks for uploading that to DarkForce. I've validated both
files and they are available to callers for downloading. They are in
File Area 14 (General).

It's similar to MS-DOS formatted floppy disks.
You have a boot sector (512 Bytes), which is always not usable for data.
And you have some File Allocation Table sectors, and last but not least
a few sectors for directory entries.
How many sectors are used for FAT and Directory Entries is set by some
bytes/numbers in the mentioned boot sector.

So this is no rocket science.

It is not sure, but very few problems can occur in my opinion:

* the ROM address has changed between STF and STE, so programs that use direct addressing (to read the ROM header for example) will hang.

* the same for joystick informations, the addresses have changed and if you address them directly, you won't get the expected informations.

I remember that the STOS games had a table included that gave access to addresses according to the TOS version. Even with an old STOS game, you could edit this table to add your own informations, that's how I made some games run on the TT long time ago.
I remember that then, a program was made to automatize this operation.

Guillaume.

Mostly. Incompatibility isn't usually from the STe itself, but a higher TOS version or more memory.

There are a couple of utilities that let you soft-boot an older version of TOS and fake 1 meg of memory even with a 2-4 meg machine.

That usually takes care of most problems. Also, check Klaz's site and Dbugs sites - they are constantly releasing "adjusted" software titles that take advantage of newer TOS versions, more memory and will run from hard drive!

I believe that there are *two* copies of the FAT table, in case one becomes
corrupted.

Hello:

I was wondering if the Highwire Web browser project is still in development or not. Can anyone give me information concerning this? I wanted to experiment in getting Web access on my Atari 1040STE.

Thanks.

-Steve P.

# 6104. Re: Scanner Drivers for Atari STE: Availability Factor…

> Hi. I have a Plustek Optic Pro 9636T flatbed scanner. I wanted to know if I could find scanner drivers for it to work on my recently acquired Atari 1040STE computer. Are there software workarounds for using a SCSI scanner for this computer? Thanks.
>
> ï¿½Steve P.

Hello,

I have two scanners: Astra UMAX 610s and 1220s and the corresponding
driver for those SCSI units.
But, I'm wondering if they work on a 1040... I use them with an Atari TT
on the SCSI port.

Anyway, you'll surely need an adapter because no SCSI is available on
the ST.

Has anyone the answer?

Guillaume.

The actual WEB browser that is developed for ATARI is Netsurf

<http://nic-nac-project.org/~monokrom/geeklog/>

I'm not quite sure that a 1040STe is convenient.

Best regards,

Well, since there hasn't been any activity for about 2 years I guess it's fair to say the project is as good as dead. Fortunately the source code is available, so it can help other projects indirectly. A free project never really dies, in a way.

Cheers,
JFL

To be honest, I'm not even sure Highwire would be usable on a 1040, if it really only has 1Mb RAM. I would suggest CAB, which is slower but known to work even on very low end Ataris.

Cheers,
JFL

## 6114. 1040 st floppy drive

Newsgroup: comp.sys.atari.st
Date: 2012-05-05 01:36:08 UTC
From: Atarinut365 <atarinut365@gmail.com>

Source record: 482

Just received a 1040 I bought on ebay. It appears to be working just fine, so far as I can tell.

The floppy eject button doesn't, but otherwise the drive works. Keyboard is missing the 3 key...anyone got a spare they can send to me.

I got the ST pretty much just for gaming. I've got a couple Falcons that I'll be selling..... for the purpose of buying a Firebee. :)

What are you alls suggestions for a pair of joysticks?

Thanks!!

That's unbelievable... you got $2025 for an Atari TT ?
In germany, one per month is sold via Ebay, the most expensive was Euro
400 (but you can get a working one for less than Euro 200 most of the time).

Regards
Peter

Apparently a couple retro folks wanted it pretty bad. And they're tough
to come by over here in the States.

Source record: 490

hi everyone!

since the retro development seems to be really active, at least for zx-spectrum, msx, c64, etc. (these first two with contests like csscgc or msxdev), would be great seeing how far is the activity on Atari ST, specially from development tools like Stos, or specially those cross-development tools (like Boriel's zx-basic compiler, for zx-spectrum)

where from can we know how far is this activity, and what should we do for keeping it alive? (like development contests like csscgc or msxdev, diskmags, demos, etc.)

thanks and cheers,
Paulo

# 6123. Atari 260ST

130 ST was a prototype. 260ST hit the shelves.

I think they released a 520ST in Europe, but not sure anymore.

The 520ST Is Very Common!My First ST Was A 1040 But Later, I Had Toad Computer Take A 520ST, Upgrade The RAM To 4 Megs Of SIMMs, I Think It Was A JRI Board, Upgrade The Keyboard And Modify It So It Has TOS v.1.0 And v.1.4 On A Switch! I Used It To Run My BBS! I Especially Liked That The Disk Drives And Power Supplies Are External! I Still Have That 520ST And My Old BBS Software And I'm Considering Putting It Back Up Again! Thanx! =-=Ben=-=

Hi,

I have enlarged my ARAnyM's collection of screenshots ...

<http://eureka.atari.org/winaranym.gif> under Windows Vista
<http://eureka.atari.org/aranym.gif> under Mac OS X
<http://eureka.atari.org/tuxaranym.gif> under Mageia GNU/Linux
<http://eureka.atari.org/screen_ps3.png> on PlayStation 3

I maintain an ARAnyM minimal configuration, running with all
these host systems and all these machines, at the address

<http://eureka.atari.org/miniPack.zip>

You have only to unzip, and run the miniPack like it is.

Enjoy, it's yours =)

# 6138. AHCC V4.11

Newsgroup: comp.sys.atari.st
Date: 2012-05-30 13:19:28 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <jq56p1$c6m$1@dont-email.me>
Source record: 306
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

LS

There is a new version available on my home page (see sig)

Changes:
may 30 2012
v4.11
Compiler:
Revision of registerization of local variables.
Produces slightly better code.
Also repairs Draconis Marathon.

Fixes a bug where a explicit cast of ptr to long or vv
was handled incorrectly.

A further bugfix (A very very old one, perhaps since v3b1).

Assembler:
Implemented opcodes:
align
aline
Allow single = for 'equals' in IF expressions.

Full implementation of 'equ' expressions.

addq.w #n,An
addq.b #n,An
silently changed to addq.l #n,An.

2 new pseudo opcodes for use with Coldfire compatible
programs:
xsave reglist
xrest reglist
The instructions generate the movem sequences required
for Coldfire campatibility. You, as a programmer, do
not have to count the registers for the lea instructions.
The compiler will do that for you and also generate
the lea's.

Library:
Provided 68000/Coldfire usable TOS bindings in case
a project did not include the AHCC specific tos.h
(The one that uses __syscall__).
The library is called "ahcctos.lib".

--
Groeten; Regards.
Henk Robbers. http://members.chello.nl/h.robbers
Interactive disassembler: TT-Digger; http://digger.atari.org
A Home Cooked C compiler: AHCC; http://ahcc.atari.org

I thought that addq.b #n,An didn't exist on the 68k...?

Correct.
Not on 68K but certainly in my head.
Beware of things that only exist in your head. ;-)

# 6152. cross-compiler 3

Newsgroup: comp.sys.atari.st
Date: 2012-06-16 21:42:15 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4fdcfdb7$0$6174$ba4acef3@reader.news.orange.fr>
Source record: 320

```
Hi,

When I try to build a GNU / GCC 3.3.6 cross-compiler according to
<http://dhs.nu/misc.php?t=special&feature=gcc336> I get the error
"
/Users/admin/Desktop/gcc-3.3.6/gcc/xgcc
-B/Users/admin/Desktop/gcc-3.3.6/gcc/
-B/opt/cross-mint/m68k-atari-mint/bin/
-B/opt/cross-mint/m68k-atari-mint/lib/ -isystem
/opt/cross-mint/m68k-atari-mint/include -O2 -DIN_GCC -DCROSS_COMPILE -W
-Wall -Wwrite-strings -Wstrict-prototypes -Wmissing-prototypes -isystem
./include -g -DIN_LIBGCC2 -D__GCC_FLOAT_NOT_NEEDED -I. -I. -I. -I./.
-I./config -I./../include -DL_fixunsdfdi -c ./libgcc2.c -o
libgcc/./_fixunsdfdi.o
libgcc2.c: In function `__fixunsdfdi':
libgcc2.c:958: internal compiler error: in do_SUBST, at combine.c:457
Please submit a full bug report,
with preprocessed source if appropriate.
See <URL:http://gcc.gnu.org/bugs.html> for instructions.
make[2]: *** [libgcc/./_fixunsdfdi.o] Error 1
make[1]: *** [stmp-multilib] Error 2
make: *** [all-gcc] Error 2
"
which is apparently a known GNU / GCC bug according to
<http://gcc.gnu.org/bugzilla/show_bug.cgi?id=23442>
I'm using gcc 4.2.1 under Mac OS X 10.6.8, on a quad-core i5.

Does somebody already encounter this bug, and bypassed it ?

Thanks to help,

Best regards,

You should really use Vincent's setup: http://vincent.riviere.free.fr/soft/m68k-atari-mint

The article is really old, I lacked experiences and everything.

>> Thanks to help,

Patrice Mandin, Vincent Rivière, Philipp Donzé, you etc. made a
really great work building cross-compilers on different platforms.
I can use these tools, and it's doing the job. The problem for me,
is it's the latest GNU tools available. I mean, I use these tools
under Mac OS X, and there's 3 native compilers available. Apple with

the Xcode tools, gives GNU / GCC 3.3, 4.0 and 4.2 native compilers.

I would really appreciate if I had a GNU / GCC 3.x cross-compiler
to build with it. There's a lot of old ATARI applications source code
that don't require the latest compiler to build. There's problems
with the "-mshort" gcc switch that is not supported anymore, and
the major evolutions of MiNTlib and GEMlib with GCC 4.x etc. The
fact also that GNU / GCC 4.x is really restrictive on the C syntax.

If I had to choose, I would prefer not to modify the C sources,
to fit with the GCC 4.x compliances, and better use GCC 3.x instead.

I tested building GNU / GCC 3.3.3 and 3.3.6 cross-compilers, but it
failed with the same error, starting with gcc 4.2.1. The first usage
of the cross-gcc (xgcc) in the building process fails ... I tried
to use gcc 3.3 native compiler instead, but I didn't succeed yet :-(

It would be wonderful if ATARI developers could choose their compiler.
I'll make some further investigations. I should have better chance to
build GNU / GCC 3.x cross-compiler, using the gcc 3.3 native compiler.

Best regards,

In that case, this must be a MacOS issue. I clearly remember building
various versions of gcc, both native and cross compilers. I think
Vincent had started with gcc 4.2, Zorro with 3.3.6 and Keith with
4.0.1 -- so all of them have been, at some point in time, able to
build it. It might be a good idea to ask them for patches, if they are
no available anymore.

# 6160. ATARI is 40 years

Newsgroup: comp.sys.atari.st
Date: 2012-06-27 17:22:57 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4feb4171$0$6170$ba4acef3@reader.news.orange.fr>
Source record: 328

Hi,

ATARI is 40 today, 2012 june, 27 !
"
In 1971, Bushnell and partner Ted Dabney managed to turn Spacewar! into
the first mass-produced video arcade game, Computer Space. It wasn't
particularly successful. Undeterred, they continued their partnership,
Syzygy, by founding Atari, Inc.. (Another company, it turned out, had
first dibs on "Syzygy.") They filed the incorporation papers on June
27, 1972, occupied 1,700 square feet of office space in Santa Clara,
California, in the heart of Silicon Valley, and got ready to release a
game they called Pong. The rest is videogame history.
"

# 6161. Selling my Falcon with CT60 and software

Newsgroup: comp.sys.atari.st
Date: 2012-06-27 17:29:52 UTC
From: julian@twinax.org
Message-ID: <24a00e2a-aa77-4ab9-9ed0-8fc82b6d5580@googlegroups.com>
Source record: 329

So, I've set to selling my Falcon and its software.

It's just the board, with accelerator and memory.

http://www.ebay.com/itm/160832830585?ssPageName=STRK:MESELX:IT&_trksid=p3984.m1555.l2649#ht_500wt_1413

The software is a separate auction but includes NVDI 5, N.AES 2.0, MagiC 6, and CD Writer Suite 4 with ExtenDOS.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=160832836938#ht_500wt_1413

Thanks for looking.

Julian

# 6165. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2012-06-30 17:30:58 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4FEF37D2.5060009@atari.org>
Source record: 333

Hi,

ARAnyM <http://aranym.org/> is the GNU/GPL ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is modified with
the new release of EmuTOS 0.8.7 and HDDriver 8.44. It supports :

`Run_win` allows launching on PC with Windows
`MacAranym` allows launching on PPC Macintosh with OSX
`MacAranym JIT` allows launching on IntelMac with OSX
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh-PC-PlayStation3 are all supported with Windows,
Mac OSX and GNU/Linux.

This simple ARAnyM configuration is running on any machine.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

The Digital Game Museum is hosting an Atari Party -- all of my systems will be there -- at Cogswell Polytechnical College in Sunnyvale on Sunday, July 29th. It's free, and open to the public! Come enjoy a variety of Atari (and other systems) games, to celebrate Atari's 40th birthday, and the 100th birthday of Sunnyvale (long-time home of Atari).

More info at:

http://digitalgamemuseum.org/blog/were-having-atari-party

My own Atari Parties, which I've run in Davis, California -- as well as some 'Retro Gaming for Teens' events that I've thrown for some local public libraries -- can be found here:

# 6168. [UtD] Eureka 2.12 Release

Newsgroup: comp.sys.atari.st
Date: 2012-07-06 16:31:17 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <4ff712d5$0$6202$ba4acef3@reader.news.orange.fr>
Source record: 336

Hi,

The Eureka 2.12 software is updated and released on its WEB page.
It is a "2D Graph Describer and 3D Modeller". You will fetch it at

<http://eureka.atari.org/eurka207.zip>
That is the Common Edition

<http://eureka.atari.org/eurka020.zip>
Is the 68020 Edition without FPU

<http://eureka.atari.org/eurkafpu.zip>
Is the 68030+881, FPU Edition

<http://eureka.atari.org/eurka060.zip>
Is the 68020-060, FPU Edition

<http://eureka.atari.org/eurklite.zip>
Is the Lite Edition, working on early ST with 720kb floppy

Complete FPU versions are now distributed. One of those is rather
intended for ATARI original machines, and the other for clones.

I wish you big fun with this new STuff !

Best regards,

Hi Miro,

Many thanks for your answer.

Miro Kropáček writes:

> no available anymore.

I finally used successfully the ATARI native GNU/GCC 3.3.6 from Zorro.
I couldn't find the correct patch for the m68k-atari-mint target yet.
Cross-compilers are very useful. But I can alternatively use native :-)

Best regards,

Saw your name on here and I remember you when I was still using my ST
1999-2002. Good to see you still here.

I bet playing Space War on the university campus was just mind blowing.
:) Anyway the birthday of Atari was featured in the Stars and
Stripes newspaper here in the U.S. Armed Forces. Was really cool seeing
that mentioned.

Hi,

Because ATARI is still co-directed by Nolan Bushnell, and the firm is
now designing games for the smartphones, they made a gift of a hundred
iPod/iPhone/iPad original games for free. That's really cool, indeed !

That's an anniversary for all of us :-)

# 6182. AGFA DUO Scan T1200

Newsgroup: comp.sys.atari.st
Date: 2012-07-17 12:44:24 UTC
From: Piotr Mietniowski <mietniow@agh.edu.pl>
Message-ID: <ju3mnl$aba$1@news.agh.edu.pl>
Source record: 350

Dear All,

I Have just receive from my friend this scanner (AGFA DUO Scan T1200),
this is a SCSI scanner.
I have a question for users of the scanner, whether it will be properly
worked with the Atari, I have the possibility of connecting it to TT or
Falcon. For now, I noticed that when you boot your machine is detected,
which program would be best to scan and the scanner handle?

Best regards
Piotr

There is a nice scanning program called Scanx by Homa Systems House, but to my knowledge it only supports UMAX and Microtek SCSI scanners.

Hope it works out!
Joe

Hello!

BITS announce their demostration

BITS 0044

Big scroll with rastered tiles,
little scroll for readability,
"BITS" logotype.
Sine lines.
Sine dots.
Stars scrolling 4 directions.
Moss effect.
Atari ST, 68000 assembler programming.
Sommarhack 2012 party.

Download:

Goodbye,
BITS

# 6204. Atari VNC Server

Newsgroup: comp.sys.atari.st
Date: 2012-08-19 15:40:29 UTC
From: Didier Mequignon <address_is@invalid.invalid>
Message-ID: <1149122711367083529.641545address_is-invalid.invalid@news.wanadoo.fr>
Source record: 372

Hi,

This is a VNC server for Atari tested on Falcon/CT60/CTPCI/Radeon and
Firebee (need 65K or 16M colors):

http://perso.wanadoo.fr/didierm/files/avncserv.tgz

Compiled for 68020-60 and mcfv4e.

For more info see readme.txt.

Regards,

Didier

# 6218. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2012-09-02 16:01:23 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <504382d3$0$6211$ba4acef3@reader.news.orange.fr>
Source record: 386

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 800, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding its HTML code.

Have a good ATARI WEB Surfing =)

all fortunecity.com urls were deleted on about may 4. service was sold, new owners did not want "free hosting" users..

when I salvage my HD, I will have some mirrors for you, including lots of geocities, fortunecity, and yahoo ST websites (plus some of the ones on ur current "missing list"

note the keyword "salvage" - only time will tell..

# 6236. AHCC V4.12

Newsgroup: comp.sys.atari.st
Date: 2012-09-22 12:02:00 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <k3k9bo$e08$1@dont-email.me>
Source record: 254
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

LS

There is a new version available on my home page (see sig).

Changes:
september 22 2012
v4.12
General:
Changed 'xref' to 'pdb' in all source files
(pdb = Project Data Base, xref.... is only part of it).

Compiler:
Fixed non Coldfire code for 'move' in some cases.
Also fixed a bug where mov3q could have been used, but
was not.

Shell:
Small fix in handling time/date stamps by make.
Pass uppercase masks to fileselecter when run on single TOS.

Assembler:
Fix dc.l name +/- nnnn
where nnnn got lost resulting wrongfully in dc.l name.

Library:
ahccstd*: Added unlink, strcmpi.

--
Groeten; Regards.
Henk Robbers. http://members.chello.nl/h.robbers
Interactive disassembler: TT-Digger; http://digger.atari.org
A Home Cooked C compiler: AHCC; http://ahcc.atari.org

```
LS

There is a new version availble on:
http://members.chello.nl/h.robbers/

october 3 2012
v4.14
General:
Removed leftover traces of a debug session some time ago.

Compiler:
Fixed a bug where a static string was not properly
used (changed without copying)
The bug resulted in incorrect compiling of ahccstdi.lib.

Assembler:
Fixed a regression where incbin statement crashed.

Have fun.

# 6248. `MacAranym JIT` with OS<10.7

Newsgroup: comp.sys.atari.st
Date: 2012-10-09 19:45:06 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <50747EC2.5010701@atari.org>
Source record: 266

Hi,

I'm quite embarrassed ... The ARAnyM 0.9.14 for Mac OS X that is
located here <http://sf.net/projects/aranym/files/aranym/0.9.14/>
on the official site doesn't work for me. It was built with
Xcode 4.5 under Mountain Lion, which native compiler is not
GNU / GCC anymore. The result for me, who still use Snow Leopard
10.6.8 on the iMac, is a crash when it is launched (Bus Error).

I learned that Snow Leopard today remains the most used of Mac OS X
versions, for compatibility reasons (thanks to Rosetta). So I
have two questions ...

- Are you hosted with Mac OS X < 10.7 (previous to Lion) ?
- Is the official ARAnyM 0.9.14 crashes when you launch it ?

If you have affirmative answers to both questions, the solution
for me will be to propose, for Mac OS X < 10.7, a working
version of `MacAranym JIT` 0.9.14, built with Xcode 3 (and not
Xcode 4.5). I've already built such a working version.

That version, built with Xcode 3, is suitable for 10.5 or upper.

If you are hosted with Mac OS X < 10.7 and the official ARAnyM
0.9.14 launches correctly, I would be very interested, because
that really doesn't work on my configuration (Snow Leopard).

Thanks,

Regards,

# 6249. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2012-10-10 16:30:16 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <5075A298.8030502@atari.org>
Source record: 267

Hi,

ARAnyM <http://aranym.org/> is the GNU/GPL ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is modified with
the new release of ARAnyM 0.9.14 version. It supports :

`Run_win` allows launching on PC with Windows
`MacAranym` allows launching on PPC Macintosh with OSX
`MacAranym JIT` allows launching on IntelMac with OSX
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh-PC-PlayStation3 are all supported with Windows,
Mac OSX and GNU/Linux.

This simple ARAnyM configuration is running on any machine.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

Message-ID: <k54gne$67a$1@speranza.aioe.org>
Source record: 268

I would really like to run my Atari software, mostly productivity, on this Mac. Especially Calamus SL 98 at the moment.

But, when I read sites like ARAnyM, GEMulator, and others, I find the instructions are above my knowledge level.

Is there anyplace with "Atari for Dummies" or similar (LOL) that could get me through this? Or someone willing to take the time to give me a hand via emails?

I'd set up my Hades 060 if I had the space. :-(

# 6253. Problem with Eiffel

Newsgroup: comp.sys.atari.st
Date: 2012-10-14 01:36:22 UTC
From: Kroll <mietniow@gmail.com>
Message-ID: <67b3967a-bed8-47d0-a3f6-75c47d3d4e5b@googlegroups.com>
Source record: 271

Hi all,

today I had a problem with eiffel for example when press a [ key I see that it was a Enter. Earlier I have but the another key (maybe it was i) I tried to programmed again and it was resolved, but now I tried and programed again the firmware of Eiffle 1.10 but still I have the information during the booting computer Keyboard failure, but the keyboard is not working at all. I tried with older version 1.06 or 1.09. I run the program Eiffelcf.app load hex file later Program flash after a one or two minutes it finished back to TOS reboot the computer but still the same. I tried to fire button during the power on the computer but still the same.
I tried under ct63/ctpci.

Unfortunately, Is it possible signs of damage, the Eiffel :(
What else I can to do it ?

Best regards
Piotr

# 6254. Very Urgent Required : Senior System Analyst for Bahrain

Newsgroup: comp.sys.atari.st
Date: 2012-10-15 06:32:55 UTC
From: vam <vinirma2008@yahoo.com>
Message-ID: <fa2e16be-e689-4237-914b-1ea34293aca4@v9g2000pbi.googlegroups.com>
Source record: 272

VINIRMA Consulting Pvt. Ltd. is a 360degree Human Resource Management Consulting and Staffing Services Organization with operations in UAE, Qatar, Bahrain, Australia, USA, Singapore & India.

VINIRMA Consulting is currently looking for Senior System Analyst for one of our clients which is a leading Banks in Bahrain with the following skill set and terms and conditions.
Skillset required:
• BSc in Computer Engineering or Computer Science or equivalent.
• Minimum 8 years of experience out of which 4 years should be in AS/400 Equation System Development and the IS/IT domain
• Equation APIs Development.
• Project lead experience is mandatory.
• Arabic speaking will be an added advantage.

Responsibilities:
• Uses established fact-finding procedures, knowledge of pertinent work processes and procedures, and familiarity with related programming practices, system software, and computer equipment to provide required analysis of business.
• Applies established procedures where the nature of the system, feasibility, computer equipment, and programming language has already been decided.
• Researches routine user problems and solves them by modifying existing systems.
• Works within defined objectives, priorities, and deadlines, and adapts guidelines to specific situations.
• Receives general instructions for specific and ongoing assignments and refers problems and unfamiliar situations to his superior.
• Prepares detailed specifications required for programming.
• Develops and maintains complex systems or subsystems.
• Determines and resolves data processing problems and coordinates
• Maintains a broad knowledge of state-of-the-art technology, equipment, and/or systems.
• Prepares and gives presentations to internal work groups.
• Provides on-call support and problem resolution for computer applications.
• Performs miscellaneous job-related duties as assigned.

Domain: Bank

Terms and conditions:

Joining time frame: 2 weeks (maximum 1 month)
The selected candidates shall be a direct employee of one of the leading Banks in Bahrain.

Should you be interested in this opportunity, please send your latest resume in MS Word format at the earliest at ambili.krishnan@vamsystems.com or call +91 0476 2681150.

Hello,

I've just started to learn APL (why? Don't know... Just did it!)

Has anyone documents (paper or scans) of the user manual for the APL
68000 version for Atari ST ????????

Thanks!

Guillaume.

Hi everyone,

still need a bit help to make my collection of ST infos/links a bit more
complete. If you know links/URLs I did not listed already, especially to
ST hardware sites, do not hesitate to send me a hint.
You can find my Atari section at my vintage computer site here:
http://www.z80.eu/atarist.html

Regards
Peter

Do you know about the *ATARI Search Engine* ? <http://fon.gs/atarians/>
There's also the *Pathfinder* <http://www.atari.org/> ... I'm trying
to collect dedicated ATARI links for the actual online scene. 800 links.

Best regards,

No (but now), but I do NOT collect only links, I have also some
additional "locally hosted" infos and files for download.
Also, I do not like to present dead links - I am only collecting working
(still alive) sites.

Look at it closer. There's not so many broken links, as you may think.
Because, I'm regularly scanning all these links, and fix/sort those.

This is hard work, indeed.

Best regards,

You're right, I found only two dead links so far
(http://www.donzï¿½.ch/atari/software/ and
http://strider.mjjprod.free.fr/ ), but I did'nt check all.
But anyway, thanks for the effort. I have to clarify what I wanted to
say... I do not want to offer _only_ links. Also, I do not like to
collect links without any relationship to Atari STs (e.g.
http://www.thepcmanwebsite.com/media/joust/joust.shtml ) ...

Regards
Peter

You're right. There's other links around to browse Philipp's WEB site.

> and
> http://strider.mjjprod.free.fr/ ), but I did'nt check all.

This one for Stider's WEB site is working. Well known !

> But anyway, thanks for the effort.

That's kind of you :-) I'm doing my best.

> I have to clarify what I wanted to
> say... I do not want to offer _only_ links.

I understand. You also want to make softwares available.

> Also, I do not like to
> collect links without any relationship to Atari STs (e.g.
> http://www.thepcmanwebsite.com/media/joust/joust.shtml ) ...

Joust is a very famous ATARI game. Well, playable on ATARI ST.
I'm also playing it on PlayStation 3, in its original form. Great !

Best regards,

> I'm also playing it on PlayStation 3, in its original form. Great !

Joust was also available for many other platforms.
Anyway, it's _not_ an Atari ST site, it's only a flash game page with an
Atari game. So it's still not related with the computer Atari ST.

Regards
Peter

Dear Consultants,

Greetings from Iconsoft Group!!!

I am Amit from Iconsoft Consulting Group, Inc founded in 1997. We are a Software development and IT consulting Company which delivers business driven solutions to Fortune 500, financial institutions, and mid-market segment firms. These solutions include application development, integration, packaged software implementation, staff augmentation and outsourcing. We provide cost-effective solutions using the most cutting-edge technologies and design, deliver, and manage our clients' projects over their life cycle. We are currently growing rapidly and expanding our client base in software areas. Iconsoft Consulting Group works with its clients across globe in any combination that meets its client needs. Our Business Development Managers, Technical Resources Managers, and Consultants work hand-in-hand with clients to improve business performance, providing an edge to any business, and create competitive advantage for our clients in the forever changing today's market. Currently we have an exclusive offer for Graduates with excellent communication skills, who are willing to learn and build their career with strong technical skills. We are looking for talented, enthusiastic candidates with strong in computers and programming fundamentals. Citizens\ Green Card\EAD\OPT Students\ H1B, L2 Visa holders, New H1Bs and H1B transfers can apply. If you refer any of your colleague or friends, you will be eligible for a bonus of $ 500.

We are offering free IT training in some of the hottest skill sets in the market such as Java, C, C++, .Net, QA, SharePoint, Salesforce.com, SAP, DataWarehousing tools, BA, etc. We are in every domain like BFSI, PEG, IMS & ERP. Some of the salient features of our training:

* Trainers with real time industry experience and certifications in IT field with over 10 years of exp.
* Realtime business scenarios for hands on training
* Training with individual attention focused on a market-oriented approach
* OPT students / New H-1s/H1 transfers are welcome.
* Immediate H-1B Sponsorship. Premium processing if needed.
* Green Card sponsorship through PERM processing.
* Competitive Starting salary with benefits and relocation assistance to client locations

Opportunity does not knock twice. Come and jump start your career at one of the fastest growing companies. Please mail your resume to amit@iconsoftgroup.com and let us know your interest. You may also refer your friends and colleagues who would be interested in such an opportunity.

Warm Regards
Amit Kumar

Hi,

Is there somebody in charge of the atari.org portal ?

My web site <http://eureka.atari.org/> depends a lot on
atari.org services. I have counters that are working good.
I have an e-mail address that is luckily well forwarded.
The problem is that my ISP recently changed its domain
name convention, and that the old name isn't still maintained.

I recently asked to the atari.org support to change my
subdomain name to the new name. Will it be corrected soon ?

My link to atari.org subdomain name is broken :-(

Thanks,

Best regards,

# 6291. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2012-11-18 16:37:04 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <50a90eb0$0$18061$ba4acef3@reader.news.orange.fr>
Source record: 59

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 800, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding its HTML code.

Have a good ATARI WEB Surfing =)

# 6295. Celebrate Pong & ATARI

Newsgroup: comp.sys.atari.st
Date: 2012-11-20 10:20:27 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <50ab596b$0$23432$ba4acef3@reader.news.orange.fr>
Source record: 63

Hi,

Here is what I just read ...

Regards,

---

*Pong Celebrates Birthday in Style*
Guests remained undisturbed.
by Daniel Krupa in <http://uk.ign.com/> November 20, 2012

Atari celebrated the 40th birthday of its creation Pong by transforming a 22-story building in Kansas City into a giant game of the seminal video game.

According to Downtown KC, Atari worked with the Downtown Council and members of the City Lights organising committee to bring the game to life on the side of the Downtown Marriott. It was part of the city's Lights festival, which marks the start of the Salvation Army's annual Christmas fund-raising drive.

It hasn't yet been made official but it's hope that the Guinness Book of World Records will certify this as 'The World's Largest Game of Pong'. Have you seen bigger ? Come on, it's on the side of a big building. What more do you want ?

<http://youtu.be/CMnd2zJfQkA> The game took place last week on Friday 16th, November.

Pong is recognised as one of the very first arcade cabinets, and if you don't know (but you probably do), it's is a simplified version of table tennis with minimalist graphics. Allan Alcorn created the game in response to a training exercised set for him by Atari co-founder Nolan Bushnell. The game went onto achieve mainstream popularity. If you want to know more about Atari and the genesis of its most famous game, read our editorial celebrating the 40th Birthday of Atari : <http://uk.ign.com/articles/2012/06/28/editorial-happy-40th-birthday-atari>

# 6302. 3D "Bretzel"

Newsgroup: comp.sys.atari.st
Date: 2012-11-24 17:25:37 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <50b10311$0$18076$ba4acef3@reader.news.orange.fr>
Source record: 70

Hi,

I downloaded "Graphing Calculator Viewer" on the AppStore, to
make my mind about this mathematical software, made on PowerMac
at Apple, about the same time I was writing Eureka 2.12 on the
ATARI 1040STf (1987). The "Viewer" is free, and doesn't allow
many things, except watching its superb live demonstration mode.
And, how surprised I had been, watching my remarkable 3D "Bretzel",
among other 2D curves and 3D surfaces :

<http://eureka.atari.org/bretzel.png> rotating under Mac OS X.

This is to explain how curious are mathematics. What an honor !
I created one day this 3D surface of the "Bretzel", of an
helical shape, when I realized that rotating on itself, it seems
to be warped, only by a sort of visual illusion.

I made a video clip <http://eureka.atari.org/bretzel.mov>, a
friend of mine David Roussel conceived a demo on a SGI station
<http://vrmlstuff.free.fr/bretzel/bretzel_2.wrl> in VRML, so
I did <http://eureka.atari.org/vrml/bretzel2.wrl> at the same time.

This is rather strange that 25 years after it first steps (1987-2012)
my Eureka 2.12 software keeps spreading out on the WEB, and inspires.
You just have to watch the recent outstanding ATARI ST demo of Mr. Coke

<ftp://ftp.untergrund.net/users/ae/dhstv/mrcoke-yet_another_4k_intro.mp4>

It's the 3D Solenoid that is remade here, surprisingly. Or the cover
of international STMag NG <http://eureka.atari.org/stmag135.jpg> where
DHS demo-makers reworked the 3D Escher Knot.

At last, I'm not the Encyclopedia of 3D softwares, but almost !
The lengthiness of the software explains why it keeps spreading out :-)

ATARIstically yours =)

# 6303. Identifying a font CD-ROM

Newsgroup: comp.sys.atari.st
Date: 2012-11-25 00:14:10 UTC
From: xlator@cix.compulink.co.uk
Message-ID: <J-ednS7TXvNP_yzNnZ2dnUVZ8kCdnZ2d@giganews.com>
Source record: 71

I have a large number of TrueType fonts on my hard drive, all having filenames of the type EXnnnn.TTF where nnnn is a unique 4-digit number between 0001 (Apex) and 2008 (Giotto Bold Oblique). I know they came from a CD-ROM, but unfortunately not WHICH CD-ROM. (I think it was German). And was it PD? I doubt that, since most fonts contain Copyright notices.

Anybody can help me identify it? The fonts were subdivided into folders DISPLAY A_M and N_Z, FIXED, SANS, SCRIPT and SERIF.

Unfortunately they were not usable as such on my Atari with NVDI (and probably other platforms too) since they had no IDs assigned to them, so the system saw them all as 5000 (NVDI adds 5000 to the actual number contained in the font). I fixed this with Arkus, giving them numbers related to their filenames, and they now work OK.

What makes you think that it was you who invented this shape? If my memory serves well, this shape is available in 3D Studio for years, maybe since the first version (along with the teapot etc).

Hi Miro,

Thanks for your answer.

Miro Kropáček writes :
> What makes you think that it was you who invented this shape? If my memory serves well, this shape is available in 3D Studio for years, maybe since the first version (along with the teapot etc).

I invented this 3D "Bretzel" surface, because I remember doing it !
There's no intellectual property with mathematical expressions, so
it doesn't matter very much, whether I'm the creator or not, but ...

I don't know 3D Studio at all, because I never ran it, ever. But
I enjoyed a lot playing with Cyber Studio, because I bought it
when it was out on ATARI ST. Knowing Cyber Studio, I can say that
it is a _graphical_ modeller, and not a _mathematical_ modeller.
So, if you want to model a complex mathematical shape, you have to
import it first from a _mathematical_ modeller. The "Teapot" wasn't
created with 3D Studio, but pre-exists from another software.

The same way, 3D "Bretzel" was probably imported from Eureka 2.12
by Tom Hudson. This sounds strange, but one of the first file export
from Eureka 2.12 was the "3D2" format from Cyber Studio. The format
from 3D Studio is "3DS". Probably Tom Hudson converted "3D2" to "3DS".

Most 3D surfaces from Eureka 2.12 were created from scratch, without
any example of mathematical modelling, because there wasn't any
software of that kind, at the moment. I just can remember that I
had sometimes access to Mathematica, and that's all. We were in the
80's and early 90's, and computer graphics were a science, not a
business. The only faraway software model I had, was Cyber Studio.

My friends and family were witnesses of the creation of Eureka 2.12.
I can even remember I've done a demonstration of the rotating 3D
"Bretzel" in a forum, doing screen shots with "Dump Screen" ACC,
and playing the movie with "IMG Show" APP, on a large monochrome
display, with an ATARI TT, one day, long time ago, in Paris :-)

Well ... Really I invented the 3D "Bretzel". You make me happy
if you tell me it was included in 3D Studio, because I didn't know.

Pong is 40 today, because it was released November 1972, 29th :-)
I know another variant of ATARI Pong, that is released today at :
<https://itunes.apple.com/us/app/pong-world/id553946340?mt=8>
This is Pong World, by ATARI, and it is free-to-play on iPhone/iPad.

Well, I tested it a very little, so far.

Regards,

# 6308. [UtD] Eureka 2.12 Release

Newsgroup: comp.sys.atari.st
Date: 2012-11-30 15:30:13 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <50b8d105$0$1372$ba4acef3@reader.news.orange.fr>
Source record: 76

Hi,

The Eureka 2.12 software is updated and released on its WEB page.
It is a "2D Graph Describer and 3D Modeller". You will fetch it at

<http://eureka.atari.org/eurka212.zip>
That is the Common Edition

<http://eureka.atari.org/eurka020.zip>
Is the 68020 Edition without FPU

<http://eureka.atari.org/eurkafpu.zip>
Is the 68030+881, FPU Edition

<http://eureka.atari.org/eurka060.zip>
Is the 68020-060, FPU Edition

<http://eureka.atari.org/eurklite.zip>
Is the Lite Edition, working on early ST with 720kb floppy

Writing Eureka 2.12 started for me 25 years ago, on 1040STf.
It continues under ARAnyM, and I look forward having a FireBee.

I wish you big fun with this new STuff !

Best regards,

--

# 6317. Re: 3D "Bretzel"

Newsgroup: comp.sys.atari.st
Date: 2012-12-19 16:17:56 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <50d1e8b5$0$1413$ba4acef3@reader.news.orange.fr>
Source record: 85

Hi,

Looking at the screenshot <http://eureka.atari.org/aranym.gif> you
will see the 3D "Bretzel" described with Mathematica 9. You will
also see the 3D "Orange" described with K3DSurf, and a Julia set
drawn with Eureka 2.12 with the help of ARAnyM 0.9.14 under OS X.

I've been recently confirmed that Eureka 2.12 works with Firebee :-)

Francois LE COAT writes :
> Miro KropÃ¡Ä□ek writes :
>> What makes you think that it was you who invented this shape? If my
>> memory serves well, this shape is available in 3D Studio for years,
>> maybe since the first version (along with the teapot etc).
>
> I invented this 3D "Bretzel" surface, because I remember doing it !
> There's no intellectual property with mathematical expressions, so
> it doesn't matter very much, whether I'm the creator or not, but ...
>
> I don't know 3D Studio at all, because I never ran it, ever. But
> I enjoyed a lot playing with Cyber Studio, because I bought it
> when it was out on ATARI ST. Knowing Cyber Studio, I can say that
> it is a _graphical_ modeller, and not a _mathematical_ modeller.
> So, if you want to model a complex mathematical shape, you have to
> import it first from a _mathematical_ modeller. The "Teapot" wasn't
> created with 3D Studio, but pre-exists from another software.
>
> The same way, 3D "Bretzel" was probably imported from Eureka 2.12
> by Tom Hudson. This sounds strange, but one of the first file export
> from Eureka 2.12 was the "3D2" format from Cyber Studio. The format
> from 3D Studio is "3DS". Probably Tom Hudson converted "3D2" to "3DS".
>
> Most 3D surfaces from Eureka 2.12 were created from scratch, without
> any example of mathematical modelling, because there wasn't any
> software of that kind, at the moment. I just can remember that I
> had sometimes access to Mathematica, and that's all. We were in the
> 80's and early 90's, and computer graphics were a science, not a
> business. The only faraway software model I had, was Cyber Studio.
>
> My friends and family were witnesses of the creation of Eureka 2.12.
> I can even remember I've done a demonstration of the rotating 3D
> "Bretzel" in a forum, doing screen shots with "Dump Screen" ACC,
> and playing the movie with "IMG Show" APP, on a large monochrome
> display, with an ATARI TT, one day, long time ago, in Paris :-)

>
> Well ... Really I invented the 3D "Bretzel". You make me happy
> if you tell me it was included in 3D Studio, because I didn't know.
>
>> Francois LE COAT writes :
>>> I downloaded "Graphing Calculator Viewer" on the AppStore, to
>>> make my mind about this mathematical software, made on PowerMac
>>> at Apple, about the same time I was writing Eureka 2.12 on the
>>> ATARI 1040STf (1987). The "Viewer" is free, and doesn't allow
>>> many things, except watching its superb live demonstration mode.
>>> And, how surprised I had been, watching my remarkable 3D "Bretzel",
>>> among other 2D curves and 3D surfaces :
>>>
>>> <http://eureka.atari.org/bretzel.png> rotating under Mac OS X.
>>>
>>> This is to explain how curious are mathematics. What an honor !
>>> I created one day this 3D surface of the "Bretzel", of an
>>> helical shape, when I realized that rotating on itself, it seems
>>> to be warped, only by a sort of visual illusion.
>>>
>>> I made a video clip <http://eureka.atari.org/bretzel.mov>, a
>>> friend of mine David Roussel conceived a demo on a SGI station
>>> <http://vrmlstuff.free.fr/bretzel/bretzel_2.wrl> in VRML, so
>>> I did <http://eureka.atari.org/vrml/bretzel2.wrl> at the same time.
>>>
>>> This is rather strange that 25 years after it first steps (1987-2012)
>>> my Eureka 2.12 software keeps spreading out on the WEB, and inspires.
>>> You just have to watch the recent outstanding ATARI ST demo of Mr. Coke
>>>
>>> <ftp://ftp.untergrund.net/users/ae/dhstv/mrcoke-yet_another_4k_intro.mp4>
>>>
>>> It's the 3D Solenoid that is remade here, surprisingly. Or the cover
>>> of international STMag NG <http://eureka.atari.org/stmag135.jpg> where
>>> DHS demo-makers reworked the 3D Escher Knot.
>>>
>>> At last, I'm not the Encyclopedia of 3D softwares, but almost !
>>> The lengthiness of the software explains why it keeps spreading out :-)

Best regards,

--

That's really exiting, I've been waiting for it for one long year.
I think this is the best graphic solution as your Falcon keeps its
original compatibility with Videl but then you can get high resolutions,
fast graphics etc...

Guillaume.

# 6326. Happy New Year 2013

Newsgroup: comp.sys.atari.st
Date: 2013-01-01 15:16:01 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <50e2fdb1$0$8995$ba4acef3@reader.news.orange.fr>
Source record: 94

Hi,

I give my best wishes of happiness and success to members of the
ATARI community. There's a lot of beautiful projects going on, we
shall congratulate about. For instance, with Eureka 2.12, which
was just published in its 2.12 release, it was announced on the portal
<http://www.atari.org/> that is really cool ! The Eureka 2.12 releases
are going on again. 2012 passed with happy and sad events, but 2013
begins with a lot of good perspectives, for ourselves. I designed a
wishes card with 40 surfaces, with 40 formulas transposed from K3DSurf
<http://k3dsurf.sf.net/> like 40 years passed by for ATARI in 2012 ...

<http://eureka.atari.org/merryhappy.png>

I bet that good expectations from 2012, will become true this year.
There's so many wishes, that are almost becoming real, aren't they.

I wish you an Happy New Year 2013.

Best regards,

--

Agreed - there are a lot of exciting projects, both hardware and software
wise, going on.

Its a fun and exiting time to be an Atarian! :)

Hope everyone is having a Happy New Years!

Sorry, for this double post. I've been trying to figure out how the
"Identities" work in the Troll newsreader. I finally figured it out,
so I won't be geek@atarians.com anymore (the default fake address for
Troll) and my signature will display.

So anyway, please check out my blog if you are interestested.

# 6338. Looking for an Atari ST(E) Gameboy Emulator

Newsgroup: comp.sys.atari.st
Date: 2013-01-10 15:08:41 UTC
From: Peter Dassow <z80eu@arcor.de>
Message-ID: <50eed980$0$6572$9b4e6d93@newsspool3.arcor-online.net>
Source record: 156

Hi Everybody,

because there is already a Z80 CP/M Emulator for the ST Series, exists
also a Gameboy Emulator ?
I am sure a 8 MHz 68000 would be fast enough to emulate at least the
original Gameboy (not Gameboy Color, Advance etc).
May be a Gameboy Color could be smoothly emulated with an Mega STE, too.
No, I am NOT looking emulators for Falcons or TTs.

Thx for any hint in advance,
Peter

There is none. After looking at the specs, I'm sure ST is to slow for Gameboy emulation.

8MHz to emulate a 4 MHz processor, I agree, it's too slow.
But what about the MegaSTE?

Guillaume.

You need to emulate video output and sound too.

As a rule of humb: you need at least 10x mhz to emulate something reliably and without too much glitches. So, you'd need at leasy 40MHz CPU to emulate 4MHz Gameboy.

Example: EmuXL is a Atari XL/XE emulator for Falcon. It is written in assembler. It is not very reliable, and on stock 16MHz Falcon you'd get about 33% speed of XL. On the other hand, Atari800 is emulator written in C, much more reliable, and you need at least 66MHz CT60 equiped Falcon to get around 100% XL/XE emulation.

There are more than one way to emulate/simulate an other device.
Think about "Wine" for example, it's not really an emulator but the
result is similar.
Also, a Gameboy does NOT need a full Z80 emulation, it's something
between a 8080 and a Z80 CPU.
A Gameboy Display has only 160x144 pixel, and there is no GPU to emulate.
An 68000 has a very efficient working set of CPU opcodes and can fetch
more data at one time (compared to a Z80 cpu).
And last but not least, there are some real working Gameboy Emulators
existing for an Amiga, too, e.g. Wzonka-Lad or AmiGameBoy...

Regards
Peter

misc/emu/AmiGameBoy.lha

Short: Great GameBoy emulator for Amiga (AGA)
Requires: AGA, 68020

Wine is completly diffrent then console emulation. It is an API emulation.

> Also, a Gameboy does NOT need a full Z80 emulation, it's something
> between a 8080 and a Z80 CPU.

This does not matter really. It is still a CPU emulation.

> A Gameboy Display has only 160x144 pixel, and there is no GPU to emulate.

Still - it does not matter. What matters is internal Gameboy video memory organizationm and how much CPU power will it take to convert it to something displayable on ST.

> An 68000 has a very efficient working set of CPU opcodes and can fetch
> more data at one time (compared to a Z80 cpu).

But, it too slow.

> And last but not least, there are some real working Gameboy Emulators
>
> existing for an Amiga, too, e.g. Wzonka-Lad or AmiGameBoy...

They are 020+, so I think that to work reliably they need something like 030@32Mhz

So, while I think that ST(E)/Mega STE are to slow, TT or (esp)accelerated Falcon should be able to emulate Gameboy.

AdamK

# 6345. NVDI availability in 2013

Newsgroup: comp.sys.atari.st
Date: 2013-01-13 18:28:32 UTC
From: surfbud1@gmail.com
Message-ID: <ugu5f8981cpqgd3jn71buj11agh0ufkit5@4ax.com>

Would anyone know where to acquire a copy of the latest version of
NVDI? I can't seem to locate my old copies and I am trying to rebuild
my systems. The old website http://www.nvdi.de/gb/NVDI5.html and
http://www.application-systems.de don't have it or respond.

Here is my equipment.
MEGA ST 4
1040 ST
Ambery Box
SC1224
SM124
40 MB Shoebox HardDrive
ST Multi Sync monitor adapter cable
True Mouse

Thanks ~ slax

You might try this message thread at AtariForum:

http://www.atari-forum.com/viewtopic.php?p=142179

But I don't know which (if any) d/l links are still
valid - worth a shot though.

HTHs.

# 6350. APL 68000 available

Newsgroup: comp.sys.atari.st
Date: 2013-01-17 16:41:31 UTC
From: Guillaume Tello <houten.van@orange.fr>
Message-ID: <50f829c2$0$1172$ba4acef3@reader.news.orange.fr>
Source record: 168

Hi,

Here is the result of some work on the old APL 68000 interpreter. It was designed to run with GEM and a 68000. I patched it to make it run on a TT (6 times faster) and on a CT060 (80 times faster).

The editor gave me permission to distribute both the APL interpreter and my patch via my wab page.

If you are interested in this powerful language:

http://gtello.pagesperso-orange.fr/apl_e.htm

This page is just a start, I hope adding a more complete program source to show various features on calculus, graphism, etc...

Guillaume.

# 6354. POV-Ray Films

Newsgroup: comp.sys.atari.st
Date: 2013-01-23 19:07:57 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <5100350d$0$1385$ba4acef3@reader.news.orange.fr>
Source record: 172

Hi,

You know about Persistence Of Vision, POV-Ray, the oldest
ray-tracing software that runs on ATARI machines, don't you ?

You may have heard that a French research team from Lyon, used
POV-Ray, and only POV-Ray, to realize an animation film about
history of Mathematics <http://www.dimensions-math.org/> This
2 hours animation picture was a tremendous success on the WEB.

What you may not know is that the same research team from Lyon,
had the excellent idea to realize a second film. This is always
fully realized with POV-Ray, and totally free viewing.

I strongly advise you to learn and have fun viewing this second
opus <http://www.chaos-math.org/> watching the first before, if
you haven't already. This is a superb realization, that truly
demonstrate the famous quality of Persitence Of Vision tools.

You're welcome,

--

Wow, there is some impressive stuff there! I'm seriously thinking about ordering the DVD.

Thanks Francois! :)

I'm using POV-Ray since a long time. I appreciate the work that
has been done for these animation pictures. I appreciate the way it
is proposed to have fun learning. The research team who realized
those films are remarkable POV-Ray experts, and also rendered with
it in a very adapted way. POV-Ray can very well render mathematics
and physical phenomenons, as a very helpful scientific tool. POV-Ray
is a good tool to visualize what could be only concepts in the mind.

And, it's free, so that films can be shared widely. Don't hesitate :-)

Regards,

# 6364. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2013-01-28 17:30:14 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <5106B5A6.4080009@atari.org>
Source record: 182

Hi,

ARAnyM <http://aranym.org/> is the GNU/GPL ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is modified with
the new releases of Teradesk 4.04 and HDDriver 8.46. It supports :

`Run_win` allows launching on PC with Windows
`MacAranym` allows launching on PPC Macintosh with OS X
`MacAranym JIT` allows launching on IntelMac with OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh-PC-PlayStation3 are all supported with Windows,
OS X and GNU/Linux.

This simple ARAnyM configuration is running on any machine.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

# 6367. Bushnell about Bankruptcy

Newsgroup: comp.sys.atari.st
Date: 2013-02-03 19:12:29 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <510eb69d$0$1181$ba4acef3@reader.news.orange.fr>
Source record: 185

Hi,

Here is latest news from Nolan Bushnell about ATARI formally Infogrames

<http://youtu.be/5L7GRNFC2sg>

"ATARI will divorce from French parents ... and I'm hopeful, I can be
part of that" Nolan Bushnell, 2013 January 30th.

We're far from Bonnell's point of view, but Bushnell is in the board.

Regards,

# 6372. Re: Bushnell about Bankruptcy

Newsgroup: comp.sys.atari.st
Date: 2013-02-06 21:34:42 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <5112cc72$0$1195$ba4acef3@reader.news.orange.fr>
Source record: 190

Hi,

We don't speak about bankruptcy anymore, because the ATARI board was
changed, and that ATARI SA has a new CEO called Frédéric Chesnais.
I hope that ATARI has found its new Steve Jobs, by the same way !

Regards,

# 6376. Tiny Calculator

Newsgroup: comp.sys.atari.st
Date: 2013-02-07 16:00:08 UTC
From: Henk Robbers <h.robbers@chello.nl>
Message-ID: <kf0j1b$2mt$1@dont-email.me>
Source record: 194
Body handling: Binary attachment payload not displayed: tinycalc.txt

LS

I have isolated the arithmetics from CALC.PRG
and produced a small utility for the commandline
(Yes, shame om me, but it happens that commandline programs
are quickly finished writing)
It might not be of any peactical use, but it was fun to do and
I wanted to show that executing basic arithmetic formulas
is not such a big deal. The actual code is only a few pages.

You can download tinycalc.zip from my Home page (see sig)
I consider the program part of AHCC distro which already
includes CALC.PRG

A brief description of tinycalc.tos is attached.

Message-ID: <225392106382747590.370369steve-atari.org.uk@news.individual.net>
Source record: 198

Hi I have two hand scanners in the box, have software package including OCR
for at least oneof them.

No interest on eBay, and no takers on free cycle. So if anyone wants them
for the cost of shipping, or swap for an Eiffel adaptor.

I also have a Lyra scanner tray/bed.

I am uk based.

Steve

# 6384. Campaign on Indiegogo for a Bloowych remake

Newsgroup: comp.sys.atari.st
Date: 2013-02-18 23:50:03 UTC
From: Thimo Gräf <bobbygehtheim@yahoo.de>

http://www.indiegogo.com/projects/a-co-op-dungeon-crawler-like-bloodwych/x/1671886?c=home

Hello,

I'm trying to raise funds for a remake of the classic co-op dungeon crawler "Bloodwych", which was released in 1989/1990 for ATARI ST, AMIGA, PC, Amstrad CPC, C64 and Spectrum.

I liked this game very much and since "Legend of Grimrock", a remake of games like "Dungeon Master" has been rather successful last year, I think it's time for a dungeon crawler with a co-op-mode.

We want pay programmers for doing an Android (cell phone, Ouya and tablet), an iOS (iPad and iPhone) and a Windows PC version. There will also be a boxed version (of the PC version) for donors, who donate more than $10 and a special edition plus level editor for donors, who donate $20 or more.

I thought this might be interesting for gamers, who played the original Bloodwych and its data disk in the 80s/early 90s.

This is my first campaign on Indiegogo, so I may not do anything right, but I promise to try as long as possible to get a Bloodwych remake done.

If you are interested, you could support this project. We are trying to get in contact with the copyright-holders, so that we can pay them and call the game "Bloodwych". If this isn't possible, the game will get another name and will be a look-alike, a clone, just as "Legend of Grimrock" is a "Dungeon Master" or "Eye of the Beholder" - lookalike.

If you have any suggestions, please let me know. My email-address is bobbygehtheim@yahoo.de, I'm a programmer myself and known as "Lord Chaos" in the ATARI - scene.

I'm located in Nuernberg, Germany and I'm looking for programmers, who could do Android, iOS and PC (Windows) versions of the "Bloodwych" - remake.

Thimo

# 6385. Atari ST/Falcon Software

Newsgroup: comp.sys.atari.st
Date: 2013-02-19 11:02:24 UTC
From: Steve Stupple <Steve@atari.org.uk>
Message-ID: <YJs8taBAv1IRFwMY@atari.org.uk>
Source record: 3

Hi all

Due to a recent move, oh yes and got married (or is it marred) last September, i dont have the space for a ton of software... well approx 24 collapsible crates ( and there the ones that i've managed to test) I will be listing them all on ebay (and making ebay a ton of money).

I do still have some rare hardware, genlock, eprom programmer, sound samplers, cant remember them all. About 20 ST's including the first one (external everything).

My ebay id is stevetheatarian

willing to swap/part ex for eiffel interface, ultra satan..

Mmmh, the taste and smell of heated up 'Lasagne Al Verde' comes up into my mind when thinking to the times when I played Bloodwych. Murlock Darkheart, Ulrich Sternaxe, Hengist Meldanash, the/my 4th hero I forgot by name... a Ninja.

Food was always scarce in the dungeons. I had a trick: While fighting an enemy you could start a conversation and the monster sells you a bitten apple for a gold piece (2 bites left on the apple) from time to time, depending to the sort of monster....
In some cases you could buy repeatedly bitten apples. I remember huge spiders were good for that (But nasty melee opponents. That kind of shopping was always a bit risky.), the rest of the conversation I dealt with bow and arrows from the distance ;-)

Best Regards,

Daniel Mandic

# 6391. mxPlay is back!

Newsgroup: comp.sys.atari.st
Date: 2013-02-23 11:42:36 UTC
From: Miro Kropáček <miro.kropacek@gmail.com>
Message-ID: <fe10fb9e-cc96-4e6c-a5f0-a7351906156d@googlegroups.com>
Source record: 9

Hi,

while the atari.org news article is pending, I'll give it a try here, too: I've come back to my forgotten child, mxPlay.

Except the boring stuff (bugfixes) I guess the most interesting one is this: the player supports asap (http://asap.sourceforge.net) and xmp (http://xmp.sourceforge.net) replay routines what makes it the most feature rich player Atari has ever seen since the times of Cream's Jam player ;-)

It comes with a prize, both are 060/FireBee/ARAnyM only. On the brighter side, it's probably the first replay routine for MODs (etc..) files which is completely hardware independent, 100% XBIOS and interrupt-free stuff.

But, to make happy also the rest of Falcon fans, there are some 030 plugins included, too. For example MGT or GT2 is always nice to have with playlist, you can take modules from Just Musix 4 and listen to them in a multitasking OS.

http://mxplay.atari.org

# 6392. EmuTOS 0.9.0

Newsgroup: comp.sys.atari.st
Date: 2013-02-28 22:15:03 UTC

Dear Atari users,

EmuTOS 0.9.0 has been released.

The main features are:
- Support for real Falcon 030 with EmuTOS-RAM
- Support for Amiga hardware
- Internal IDE driver enabled by default

See the full changes there:
http://sourceforge.net/p/emutos/news/

And download your preferred binary archive there:
http://sourceforge.net/projects/emutos/files/emutos/0.9.0/

Enjoy!

# 6398. Hades 060 and SLM 804

Newsgroup: comp.sys.atari.st
Date: 2013-03-04 23:51:14 UTC
From: Ken Springer <wordworks@greeleynet.com>
Message-ID: <kh3c1i$r2f$1@speranza.aioe.org>
Source record: 16

I've not had any of my Atari equipment set up and running since 2004.
I'm finally in the process of setting up my Hades 060.

In 2004, I also had a TT030, which I've since given away to a friend
that had a TT failure. I had this SLM 804 attached to the TT.

Is there any way to attach the SLM 804 to the Hades via some kind of
adapter?

Thanks.

# 6400. ACP/FireBee News

Newsgroup: comp.sys.atari.st
Date: 2013-03-07 19:08:26 UTC
From: Mathias <user@domain.invalid>
Message-ID: <newscache$261bjm$fa8$1@news.sil.at>
Source record: 18

Hi,

I would like to inform you about our News published today. They are not
just interresting for the FireBee, but for all of oyur Atari environments:

Highlits are:

-) MPEG 1 decoding with mxPlay - means officially MP3 at the FireBee!
-) new zView version (with improvements for ColdFire, TOS and MagiC)
-) Native V4e highwire
-) FireBee FreeMiNT setup now for ARAnyM as well
-) 11 new program versions
-) ...

The news are already available in four languages:

English: http://acp.atari.org/news.html

http://acp.atari.org/news_it.html
http://acp.atari.org/news_es.html
http://acp.atari.org/news_de.html

# 6401. when studying the coat

Newsgroup: comp.sys.atari.st
Date: 2013-03-08 09:53:21 UTC
From: Hunter <hunter@free.com>
Message-ID: <98117680@neptun.beotel.yu>
Source record: 19

:-)

After analyzing the coat and its association with the graphics optimization,
someone may increase the maintenance of the graphics separately;
why did you detail the coat design as well as the graphics facilities management?

;-)

## 6402. treatment ?

Newsgroup: comp.sys.atari.st
Date: 2013-03-08 19:50:21 UTC
From: boris@yahoo.com
Message-ID: <11626828@aioe.org>
Source record: 20

Tchao.

it should be interesting to integrate the data analysis of the graphics with
great care;
could you explain how to detail the coat management as well as the concept of the graphics
outsourcing?

;-)

# 6403. lessen the coat

Newsgroup: comp.sys.atari.st
Date: 2013-03-08 20:31:21 UTC
From: betatwelve <betatwelve@voila.fr>
Message-ID: <4d0d506@aioe.org>
Source record: 21

:-)

These two articles look similar:
They are also a good reference if you feel
that you are making major errors in your portraits.
They are also a good
reference if you feel that you are making major errors in your portraits.

Most artists make the greatest number of changes at the start of a drawing.

If you get the correct relationship between the eyes, nose and mouth, you
will end up with a good likeness.
They are also a good reference if you
feel that you are making major errors in your portraits.
If you get the
correct relationship between the eyes, nose and mouth, you will end up with a
good likeness.
3. Using larger areas of tone to unite all the elements
of the portrait.
3. Using larger areas of tone to unite all the elements
of the portrait.
If you get the correct relationship between the eyes, nose
and mouth, you will end up with a good likeness.
The general proportions
of a head that we outlined on previous pages are ideal for drawing realistic
heads from your imagination.
3. Using larger areas of tone to unite all
the elements of the portrait.
;
what is the objective of the coat design?

Yours, sincerely

## 6404. Where are all the Falcon owners hanging out?

You can try this:

http://www.atari-forum.com/

or this one:

http://www.atariage.com/forums/forum/20-atari-sttt-computers/

and eventually this one, but not really dedicated to general discussions
around the Atari:

http://dhs.nu/bbs-scene/

Guillaume.

# 6406. wanted Eiffel adaptor and netusbee

I am after the above if someone has one they don't use, I would be very grateful. eBay me direct at steve@atari.org.uk

If I've got something you want and want to do away with money and swap, I have some gear on eBay, just finishing testing 2 more crates and more software will be listed.

My username is Stevetheatarian

Steve

# 6407. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2013-03-09 16:00:10 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <513B5C8A.2000804@atari.org>
Source record: 25

Hi,

ARAnyM <http://aranym.org/> is the GNU/GPL ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is modified with
the new releases of zView 1.0 and EmuTOS 0.9.0. It supports :

`Run_win` allows launching on PC with Windows
`MacAranym` allows launching on PPC Macintosh with OS X
`MacAranym JIT` allows launching on IntelMac with OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh-PC-PlayStation3 are all supported with Windows,
OS X and GNU/Linux.

This simple ARAnyM configuration is running on any machine.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

Exactly!
It comes with a "runtime" program that allows you to diffuse your work.

guillaume.

# 6418. [UtD] ATARI Search Engine

Newsgroup: comp.sys.atari.st
Date: 2013-03-11 16:00:15 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <khkv2b$iq3$2@speranza.aioe.org>
Source record: 36

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 800, is to constitute an ATARI uptodate and dedicated search engine of the on-line scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI web-masters adding its HTML code.

Have a good ATARI WEB Surfing =)

You can also upload them yourself in incoming with a small *.UPL readme file
(which I find is an important addition). They will be picked up by Martin
and moved as he sees fit in the hiearchy of the server and then announced.

Cheers,
JFL

Hi,

atari.org server is down <http://websitedownornot.com/atari.org.html>
Will it be back on-line soon ? Links are broken, and email delayed :(

May we have news from the maintainers ?

Best regards,

There is a message thread about it at Atari Forum:

http://69.90.163.150/~atari276/viewtopic.php?f=28&t=24756

Seems they had a hardware crash and are in the process of
switching and restoring from backups.

Thanks for the news. So, it may take a week to fix the server. People
are working on it, to replace the hardware that is out of order. We
will wait until that great service come up again. We're quite a lot :-)

Best regards,

# 6435. [UtD] ARAnyM miniPack

Newsgroup: comp.sys.atari.st
Date: 2013-03-27 18:45:25 UTC
From: Francois LE COAT <lecoat@atari.org>
Message-ID: <51533E45.20604@atari.org>
Source record: 203

Hi,

ARAnyM <http://aranym.org/> is the GNU/GPL ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> miniPack is modified with
the new releases of freeMiNT 1.18.0. It supports :

`Run_win` allows launching on PC with Windows
`MacAranym` allows launching on PPC Macintosh with OS X
`MacAranym JIT` allows launching on IntelMac with OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh-PC-PlayStation3 are all supported with Windows,
OS X and GNU/Linux.

This simple ARAnyM configuration is running on any machine.
Here is a screen-shot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =)

# 6438. E-Bay and Pay Pal Policy Problems..

Newsgroup: comp.sys.atari.st
Date: 2013-03-30 23:19:42 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <5157731b$0$10370$bbae4d71@news.suddenlink.net>
Source record: 206

To any customer who wanted to purchase a Item from
me thru E-Bay and Pay Pal.

It is against my business Policy to ship out my Items without at least
being able to transfer Shipping to my Bank Account.

This is not my Fault, I Always ship when paid in full or at least
get the shipping amount tranfered to my Bank Account.

I do not have your Money. E-Bay and Pay-Pal does.

There has not been One transfer to my bank account that
was setup to serve the Atari Community thru E-Bay using Pay-Pay.

Do not bame me, It is there business practices that have caused the
problems.

Sincerely
Barry

# 6439. Looking for Alternative to E-Bay and Pay Pal for Atari business

Newsgroup: comp.sys.atari.st
Date: 2013-03-31 14:42:43 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <51584c3f$0$10358$bbae4d71@news.suddenlink.net>
Source record: 207

Doing some research on other companies or ways to do business,
without using E-Bay and Pay-Pay.

If anyone has any suggestions, I'd like to know about them.

At the moment, I would setup a system for buying, selling Atari related
items my self. If there is enough call for it.

Holding the Money between the buyer and seller is wrong, at least the
way I have always known how to do business.

Go to just about any store and pick up a item and walk out the door and
see what happens!

Barry

# 6440. In other News we are working on a new game Called E-Burn and Pay-NoBody

Newsgroup: comp.sys.atari.st
Date: 2013-03-31 14:58:28 UTC

Message-ID: <51584f8a$0$10358$bbae4d71@news.suddenlink.net>
Source record: 208

This new game is sort of based on Sim City.
The object is to lure people to sell product thru your Computer
system. Then keep the money and let what ever happens happen.

Game development is in its beginning stage. I'm open to suggestions
on options to go into the game.

Barry

I use PayPal a lot, and yes when people pay via PayPal it doesn't go into your account unless requested,then takes a fe days. I get around this by using couriers that take payment via pp, I also have a PayPal MasterCard which is linked to my account, and I use that to pay shipping from the post office.

So when people pay me, I have access immediately.

Barry, what's your eBay I'd?

Steve

# 6446. The DarkForce! BBS March 2013 winner!

Newsgroup: comp.sys.atari.st
Date: 2013-04-01 17:42:30 UTC
From: "Ronald J. Hall" <darklord@suddenlink.net>
Message-ID: <5159c706$0$10363$bbae4d71@news.suddenlink.net>

Greetings everyone!

Here is the lucky winner for March 2013 at The DarkForce! BBS:

March 2013
1. Atarian wins a free 12 issue/1 year subscription to
Atariuser Magazine!

---

Also, here is the April 2013 prize:

April 2013
1. Atariuser Magazine - some lucky caller will win a free 12 issue
/1 year subscription to Atariuser Magazine.

Congratulations to our winners, and good luck to this months callers!

:)

PS Atarian, I need your e-mail address!

Normally I wouldn't mind telling you.
This isn't the first time that E-Bay has ripped me off.

Tired of it.
Barry

# 6448. Powered cable for Gigafile - photo.JPG (0/1)

Newsgroup: comp.sys.atari.st

Could anyone give me guidance on getting a powered cable for the
Gigafile SD ACSI box. I purchased one from Wolfgang at Iventronik but
I don't have a way to power the device.

# 6450. FDI Unit for Falcon 030

Newsgroup: comp.sys.atari.st
Date: 2013-04-05 20:33:29 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <515f3526$0$10405$bbae4d71@news.suddenlink.net>
Source record: 218

Anyone who reads this group have any
experience with a FDI?

I recently bought one and have a Analog 8.
And a Original Cubase Audio Package.
Have 2 Small DSP clocks.

Also have Logic Audio, with Unitor II and the other cart that
has more MIDI ports on it.

I'm not into MIDI alot, mostly D2D recording, making my
own Audio CDs.

I'm interested in the Coaxial part of the FDI.
I have some fiber optic cables that I think will work with it,

I need to know if I can use the Coaxial Input/output with a Mixer board.
to transfer Audio from the Falcon with FDI to Mixer, then on to
other recording equipment?

I got no manual with the FDI, I've read some about it on the Net,
But, I'm not finding the info, that I'm looking for. As to just what
it is capable of.

I can run the FDI with or without the Analog 8. But I need the
clock at 44.1 when working with Audio files, or D2D recording.

Any help is appreciated.

phantomm@suddenlink.net

If you use the coax output, you need a coax digital cable, not optical.

I haven't used mine to go out to other equipment much. I have a mixer with
a coax out, which I use as an input mixer to my Falcon. The mixer also
provides the 44.1 clock. Whatever is
hooked up to the mixer is converted to digital for input to the Falcon.
I edit the audio with Cubase, and then mix everything down to a stereo
file.

A long time ago I used the optical out into a Sony minidisc recorder to
make masters and it worked great. You shouldn't have a problem doing
the same with whatever equipment you have that will accept digital
input at 44.1 CD quality.

Hi,

Appreciate the info,

I'd like to find out more about going Out with the FDI, also about going IN.

With the FDI installed, I want to know if I can still use the Falcons
Standard Audio INput and OUTput too.

Thing is, I'm not sure if the FDI alone, is suppose to take place of the
Falcons standard Audio IN and Audio OUT.
Which this also may have something to do with the software you use, as Some
will allow you to select different options.

I'm working on a experiment with Audio and I don't want to screw up the DSP,
or the Falcons standard Audio IN and OUT.

The Mixer I have doesn't have a port labeled COAXIAL, which is what I will
be using. But it has alot of other ports like a AUX port.
And STEREO L and R, also MONO, Phantom Power switch, Mic Ports and etc.
Some have said that RCA cables can be used with
the FDIs Ports if you keep them short. I'm going to get some good Coaxil
cables anyway. And am looking for maybe another mixer that
has a Coaxial Port, also, maybe a effect Processor. Also maybe sometype of
Recorder. I know DAT, use to be big, but I'm not real
fimilar with it. Basically I want to do a Solo music project, And need to
do Some OverDubbing, recording Direct to Disk.

Also, looking for a good deal on a decent size SCSI hard drive if anyone has
one or two for decent price or trade. Need 50 Pin.

And Need some 68PIN SCSI converters to 50 PIN, if anyone has em. I have
around 20 new 68 pin SCSI drives, And I need
converters to make them 50 pin.

Any help, ideas, on the FDI and Analog 8, is appreciated. I'm trying to
understand how the FDI affects the Falcons Stock Audio system.
Before I start connecting things up. Cause I don't want to blow something
important.

BTW, just want to mention that I am selling alot of my extra Atari ST-Falcon
software and hardware and will trade also.

I'm looking for a good copy or original 4TFX or similar, It was one of the
first Audio Falcon programs that came out.
My version seems that one part works and the other bombs.

Also, looking for Audio software/ hardware I don't have. might be
interested in a JAM 4/8 IN or similar.

And anyone know about the CLAB Unitor II Cart? Like some info on the
Multi-port and the other IN port, as to what I can plug into
it with software other than Logic, if there is any.

thanks,
Barry

Can one simply change the drive Mech out of an Atari 354 disk drive and
get a DS/DD Drive, if thats the type of Mech you put in it???

The Atari 354 is a single sided drive asfaik.

Also, if you put a 1.44 Mech into a Atari 354 drive, would it work as a
DS/DD on
a 1040STE, But if you connected it to a MEGA STE as a second drive, would
it work
as a DS/DD and or a 1.44 Drive, especially if the Mega STe has the 1.44
internal drive?

Or does something else need to be done.

# 6461. Re: FDI Unit for Falcon 030

Newsgroup: comp.sys.atari.st
Date: 2013-04-15 05:26:51 UTC
From: JoeAtari <geek@atarians.com>
Message-ID: <kkg32q$ajg$1@speranza.aioe.org>
Source record: 229

If you want a quality recording (and monitoring) stay away from the Falcon's standard inputs. You can use your analog mixer for input, but you need some type of D/A converter like a DAT machine to go through, or an ART D/IO (converts analog to digital) or something like that. A mixer with a digital out is really the way to go. I have an Alesis Multimix 12 FXD. I'm sure there is something better by now, but it works like a charm with the coax out to the FDI coax in. The mixer has built in effects (not great, but works okay for me). Whatever I have plugged into the mixer gets converted to digital, sent to the FDI and into the Falcon for Cubase Audio. The mixer also has a "control room" section, so I don't need an additional output mixer to monitor things. That silly little $100 and something mixer did away with a whole rack fully of additional gear for me (effects and output mixer).

Hope your project works out!

JoeAtari

ok, I have the SoundPool Analog 8 which gives 8 RCA type Outputs.
I thought that it converted digital to Analog, ( i'll have to do some more
research on it).
Anyway, with some software, It will ouput a different song/sample on each of
the 8 outputs.
While other software will output a song or sample on all or just about all
of the 8 outputs.

Some software knows if the FDI and or Analog 8 is connected and you can
choose the way you want
to use it. So I'm tring to stay with the software that will use these
items. I also have 2 small Cubase DSP clocks.
That I can use on my other Falcons. I have several Falcons, and am in the
process of setting up a Studio based on
them. Also have a nice 1040STe, Mega STe, a SonoVista which is based on a
Falcon, Also a Mega ST4 that needs
a Video Shifter, and a STacy 4 that's apart for a upgrade project. Just
haven't had time to do the upgrades to it yet.
It will be a nice Stacy if all goes well. I'd like to put some type of PC
emulator board in it, I read that there was one
that would work in it, If anyone has one for sale/trade, let me know.

Also, did some experimenting with the TOS in the STacy, but it seems that it has a special type of TOS and I'm not sure
if it can be upgraded. I'd like to upgrade it to at least Tos 1.62 the STe TOS, as I know most stuff will run on that Tos.
Although TOS 2.06 or better wouldn't be bad for newer software.

I recall some software that allows you to boot up the TOS you want on a Floppy. I have it here somewhere.
Not sure if it will work on a hard drive, as the STacy has one. 20megs, need to put a larger one in.

One of the problems, I ran into with the STacy is the internal PowerSupply, it sits over the 68000 or close to it.
I removed the 68000, and plan on putting in a 16mhz board with a 68000, and maybe a tweety board.
I think I know a way to put the power supply in a different location. But if there is another type of Power Supply
(Internal) that I can get, I'd like to know about it.

If anyone knows any other upgrades or modifications for the STacy, I would like to know about them.

The Stacy 4 is normally monochrome, unless you connect it to a Monitor, I did some experimenting with a
Video Key, and monitor master. It would be cool if I could find a way to replace the STacys stock screen,
with one that I could do Color and Monochrome with. Maybe I could get sometype of graphics card in there.
I have a spare ET4000, also a Nova but its in my MSTE.
I do have 2 SuperChargers, so I can connect one of them to the STacy. Maybe if I take the board and find room
inside of the STacy and make some cuts for the ports. (Hmmm) that might work. I'm only interested in running DOS
mostly anyway. And the SuperCharger gives you another meg to use IIRC.

Well, I got off topic, was talking about Falcons and Music. My Mixer is a New Yamaha, has alot of ports, and effects.
As I set it all up, I'll see if I have to get a Mixer with a Coaxial port.
It may have one labeled sometthing else. If not,
I'll look for one if I have to have it to do what I have in mind.

thanks for your help
anyone else with knowledge on using the FDI/Analog 8, I don't mind some advise or
reading about your experience using it.
Also, looking for Falcon Audio software, will pay cash/trade.
And looking for hardware to use a Router with my Ataris with STing (anyone)?

Unlike amiga drives, atari st drives are sort of standard. So any 3.5"
drive should fit as they use the stand schugart interface. I've never tried
a direct replacement for hd drives, you won't be able to go hd but should
be able to read dd disks though.

most ibm drives are set too drive b so you need to set it to drive A all all later disk drives for ibm do this with the cable.
try to find a drive with < A -B > on it try a 720k drive from a apple.
some 1.44 drives will not work on a stf - stfm -ste. // megaste may work in 720k only.

# 6468. The FALCON 030 LAN Port of MYSTERY

Newsgroup: comp.sys.atari.st
Date: 2013-04-20 19:34:56 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <5172edf4$0$12742$bbae4d71@news.suddenlink.net>
Source record: 236

As long as, I've had a Falcon 030, I've looked for software to make use of it.

Wether connecting two Falcons together with the Lan ports (if possible).

Or using the LAN for connecting to the Net.

Is the Falcons LAN Port Bugged? Or is it just lack of software?

IIRC, the Modem software STalker, can make use of the LAN port.

ALL, this problem seem to begin with the Falcons bugged modem port.

I have HSmodem7 installed, but dont know, what is set for the LAN port, as most of the doc I have is in German. And at the time, there wasn't any translators around.

I was wondering, if anyone reading this group, has some good knowledge of the Falcons LAN port.

I'd like to know what software (if any) is out there to make some kind of use
of this port.

Also, can someone send me HSMODEM7 with English Docs, OR the necessary files to make the most of the modem port and Lan Port. I am using STing 1.26.

I have 2 Centurbo II B versions, and 3 Falcons with small upgrades, but no major
Processor upgrade. I recall, the CT2B really rocked on the NET, back in the Modem
Days.

Now, I have a collection of various Routers that work, but I have no way to connect to
my Falcons. Although, I found a interesting Cable, that I can connect a Router to any Atari
ST-Falcon. I'm going to experiment with it and see what happens.

Also have a collection of those PC ethernet boards.

Is there anyone making a device so I can connect my Falcon or other Atari to a regular Router?

And does anyone know any tricks, to get a Router connected to a Falcon and actually get online
with it, without trying to hunt down hardware that doesn't seem to exist.

I was going to do sometype of Null Modem to my Laptop, Or another option I know about,
but that's really not what I need. I can always download software to a CD and then put it into
one of my Falcons CD drives.

I may go back to the old 56K Dial up. The CT2Bs were not that slow anyway. I have some ideas in mind, so I may be able to come up with something on my own.

# 6469. Wanted SCSI 50 pin Hard Drives

Newsgroup: comp.sys.atari.st
Date: 2013-04-21 01:29:17 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <517340fc$0$12770$bbae4d71@news.suddenlink.net>
Source record: 237

Greetings,

People, I'm looking for some 3.5 50 pin Hard Drives.

They do not have to be in a case, but I may be interested
in any like that as well.

I can re-do most PC 50 pin hard drives to use on my Ataris.

So, if anyone has any for sale/trade/donate please e-mail me.

Mostly looking for 500megs and up.

Any help is appreciated.

phantomm@suddenlink.net

None of the above. Falcon LAN port is in fact RS-432, also used in Apples for AppleTalk. It is fully functional, but it is not compatibile with ordinary (RS-232C) modem hardware. You need an adapter which my be hard to come by today.

To make matters even more intresting, there is even one more RS-323C port "hidden" inside every Falcon - there is hardware and it works, but there is no socket connected to it. Some brave souls connected it themselves, and it worked.

HSmodem7 is a bit buggy. If you use FreeMiNT, use FreeMiNT serial drivers instead. Read FreeMiNT docs, there is some explanation about Hsmodem7. I remember seeing english docs for it, so search FTP sites carefully.

Any software that allows selecting that port. But you will have troubles finding proper cables.

There are three options.
NetUSBEE (for any ST/TT/Falcon) - I do not think anyone produces it atm., but all specs are freely available, and you may be lucky to find it on ebay. (http://hardware.atari.org/netusbee/netus.htm). This guy: http://lotharek.pl/ is gearing up to produce it if there is enough intrest.
EtherNAT (for CT60) - daughterboard for CT60 (http://nature.atari.org/)
SvETHlana (for SuperVidel) - daughterboard for SuperVidel, which is daughterboard for CT60, which is daughterboard for Falcon :). Soon to be released (http://nature.atari.org/)

> And does anyone know any tricks, to get a Router connected to a Falcon and
> actually get online

IMO, software-wise FreeMiNT is your best option.

> with it, without trying to hunt down hardware that doesn't seem to exist.
>
> I was going to do sometype of Null Modem to my Laptop, Or another option I
> know about,

Null modem is a good idea. One word of advice: running it at half of maximum speed might be better then at maximum speed. Reason is, Falcon RS-232C hardware is unbuffered, and if Falcon is to slow to recive byte from it (which often happens when you run at 114200baud speed, and it does not work reliable with that speed. 56600 baud is much more reilable (and because of obscure technical reasons) faster when doing TCP/IP over it.

I have my falcon connected using etherNEC via Ethernet to my routers. Can
FTP fine etc, got a problem getting cab running.

As I was moving my Ataris around, so that they are more accessible, I noticed the mega ste has the same AppleTalk port. There are quite a few cables on eBay for the port, seems to be lots more cables for everything USA side of the Atlantic. Anyway got myself an AppleTalk cable so can now play with the port. So in theory I can connect falcon n mate together.

Steve

Atari setup shouldn't make a difference, I'm using hd in my lighthouse
towered ste, and have no problem. My mste came with a hd drive. The floppy
lines on the st's are connected in parallel with each other. That's why you
are able to have 2 external drives daisy chained, if you disconnect the

internal one.

Hey Steve,

thats something I'd like to try as well. At the moment my MSTe is in
storage
utill I get my other equipment setup the way I want it.

It's not all that important for me to connect my Ataris to Routers and etc.
as I use
them for only a few things. Although I have tons of software on drives, CDs
and
disks. Same with 8-bit, Got to set that system back up for a project.

But if I can find the right hardware, or do it myself then I would like to
set a few of them
up.

I think I can still do the old modem dial up around these parts, if so I may
go that route
for a while, I miss tinkering around :)

Barry out,

# 6478. EBAY ATARI SELL

Newsgroup: comp.sys.atari.st
Date: 2013-04-27 17:33:55 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <517c0fe3$0$12791$bbae4d71@news.suddenlink.net>

Greetings,

I'm in the market for a JAM 8 IN and maybe a JAM PRO and
also a JAM 8 OUT.

Are these still available new?
Link please

If not, looking for used especially JAM 8 IN or a similar device,
not sure if Sound Pool made something like this?
If so, and have one for sale let me know.

thanks,
phantomm@suddenlink.net

> most ibm drives are set too drive b so you need to set it to drive A
> all all later disk drives for ibm do this with the cable.
> try to find a drive with < A -B > on it try a 720k drive from a apple.
> some 1.44 drives will not work on a stf - stfm -ste. // megaste may work
> in 720k
> only.
>
Well I need it for a Drive B as the Atari 354 drive i have is a external

drive. Single Sided.
My MegaSTE has a 1.44mb drive A inside.
If you have ever connected a second drive to a MSTE that has the internal
1.44mb Drive A
you'll understand what I'm talking about.

However I have a 1040STe, and using the 354 as a Drive B thats DSDD would be
ok.
I'm just wondering what type of Mech will work and if a 1.44 would do both
jobs if I want to
use it for either the 1040STE or MSTE as a second 1.44.

Barry

moi aussi j ecoute en boucle je ne vous oublie pas ses paroles vous transpercentet vont droit au coeur de tout ceux qui l aime vraiment, moi je l adorais mais depuis que je l ai vu sur scène a vegas elle m a ensorcelé et et envouté et moi aussi j en reve plus d 'une fois qu elle vient me voir et qu on parle,http://www.bizeulimmobilier.com/donnee.asp. [,http://www.camping-soirdete.com/reserves.asp.] . [.].
Dersom du leter etter et overnattingssted med forretningsvennlig profil i Fort Lauderdale, bør du se nærmere på dette hotellet i nærheten av båthavn, som tilbyr gratis trådløs Internett-tilgang. Det finnes mange flotte attraksjoner i nærheten av dette overnattingsstedet, som blant annet Bonnet House-museum og hager, Hugh Taylor Birch statspark, Stranahan House og Las Olas Riverfront. I nærheten finner du også Broward senter for utøvende kunst og Galleria.
Sont stigmatisées les liasses de billets dépassant de la poche arrière qu'on sort ostensiblement pour les y remettre ensuite, les portables dans les poches béantes, les sacs sans fermeture. Ces indications sont publiées sur le site de l'office du tourisme à Paris et sur les sites consulaires des ressortissants. «Les annonces orales à l'extérieur et à l'intérieur du musée sont également très dissuasives», indique la direction de la communication du Musée d'Orsay qui les a mises en pratique tout en renforçant la sécurité sur le parvis..
Este establecimiento proporciona servicios de transporte desde el aeropuerto (puede aplicarse una tarifa). Los huéspedes deberán ponerse en contacto con el establecimiento con su información de llegada antes de emprender el viaje utilizando la información de contacto que figura en la confirmación de la reserva,http://www.bizeulimmobilier.com/donnee.asp. Hay habitaciones comunicadas o contiguas,http://www.camping-soirdete.com/reserves.asp, sujetas a disponibilidad.
Si vous souhaitez passer un séjour agréable, choisissez ce motel qui accepte les animaux de compagnie. Economy Inn propose 83 chambres confortables qui comprennent une piscine privée et des appels locaux gratuits. Les chambres donnent sur un balcon,http://www.bizeulimmobilier.com/donnee.asp.Related

> phantomm@suddenlink.net

Double sided should work, I use a 720k with my mste, and that will work for
both machines. Can't say what a 1.44 would do on a mste as I haven't needed
to try it, but you won't be able to use hd mode on a standard ste. I had to
modify mine.

But saying that, and knowing how they are wired, there shouldn't be any
reason you shouldn't be able to use hd on the mega. All drive lines ar
parallel to each other, they are all connected, that is how discovery
cartridge is able to duplicate disks n the spectre mac emulator being able
to treat them as mac drives.

# 6494. ATARI FALCON 030 INPUT/OUTPUT Ports

Newsgroup: comp.sys.atari.st
Date: 2013-05-06 18:31:38 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <5187f71a$0$12744$bbae4d71@news.suddenlink.net>
Source record: 112

Greetings,

I'm looking for a project and info to upgrade one of my Falcon030
Audio IN put and Audio Out Put to standard RCA Ports.

Similar to what the 1040STE has.

I'm not sure how many Audio Inputs, I can install or How many Audio OutPuts
I can install.

Anyone know of a DIY project that I can go by to do this?

Also, I recall there was a device by LINE AUDIO called JAM IN and JAM OUT
also
JAM PRO IIRC.

I would probably be interested in purchasing the JAM IN and maybe the JAM
OUT or
the JAM PRO if I can find these items.

Anyone know where I can buy them, even overseas, do let me know.

thanks,
Barry

# 6501. Re: The FALCON 030 LAN Port of MYSTERY

Newsgroup: comp.sys.atari.st
Date: 2013-05-17 19:09:39 UTC
From: Barry <phantomm@suddenlink.net>
Message-ID: <5196807e$0$12761$bbae4d71@news.suddenlink.net>
Source record: 119

Thanks for sending the copy.
I was expecting a zip file, it looks similar to what I use
to so with DiskCom or something.
I think I can get the file out of it.

BTW, I found some interesting items that I bought but haven't tested.
One is a RS232 Serial Port to EtherNet Port. No power supply and small.

The other item is a Serial to EtherNet port which has more electornics in
it.

So maybe I can use these to do something.
Barry

BTW, I was reading the other day on how fast the standard MIDI Baud Rate is.
Some hardware upgrades like the Centurbo II B, have a connection to the
MIDI chip.
Does this increase the speed of the MIDI ports?

Reason I ask, I have 2 different MIDI kits which basically connect one
machine to the other.
There was suppose to be a LAN kit like this with software, But I haven't
been able to find it.

I would like to get the software, I'm not sure if the kit just used a cable
or something else.
The MIDI kits both have a Box for each machine with midi cables coming out
of them.
One kit is connected by a Coaxial wire and the other seems to use a standard
telephone wire.

I have original software for the one of the kits, think it's the one that
uses the Coaxial Wire.
The other kit, not sure it has no name on the boxes. However I have found
some early MIDI
Software regarding connecting Ataris to transfer files and etc. Not just
Music.
I started testing, and got some good results. But went on to other things.

I'd like to find some LAN software, something I've not found. I do have a
few Lan cables.
One connects to a modem, One is just a straight connection. I don't know if
something like
a Null Modem Cable applies to the LAN port? Or if I need software to
transfer files, if I
connect 2 Falcons together with a Lan Cable. I'm not sure what to expect
when there connected?

LAN to EtherNet seems logical to me, as the LAN port is suppose to be pretty
Fast anyway,
if my info is correct.

Barry

Don't have a panasonic.

Do have a Atari XDM 121 Daisy Wheel Printer, which is more used to do
a nice letter type set. I still Have my STAR Gemini 10, I just uncovered it
to day and also some black type writer style ribbons. That printer really
cuts down
on Ink cartridge costs. I just bought a new All in one printer not long ago,
and
all ready I've had to replace one Ink Cart. For a few more dollars, I could
have
bought a new Printer with New Carts. CRAZY, I can almost see that moutain
of printers going into a land fill over crazy Ink prices.

Anyway XDM121 is for sale or trade at right price, but not giving it away.
The ribbon cart, can probably still be found. and I think the one I have
still has a few pages left in her.

Rock on!
Barry

Hello!

New demostration by BITS
for OUTLINE 2013 Party competition:

"Loader with scroll and animated logotype,
laser lines effect.
3D scroll effect.
Very fast scroll line with 2 layers background,
star paintings.
Concentric circles and rectangles color animated.
Moving logotype, scrolling words, falling leaves,
background scroll.
Again a little drum and bass and YM-2149 chip."

Hi all

My 1040stf has just died, so I'm after any stf or stfm with 1 meg, or more. Don't need mouse, just the machine. I have plenty of cases so just a motherboard would do. I cant test non ste 1 meg software until I can get one.

Got to be uk model.

Thanks
Steve

Ho, yes, thanks. I knew this site <http://joo.kie.sk/ultrasatan/>
that is UltraSatan. But <http://joo.kie.sk/satandisk/> is missing.
Then for the second, I should replace with yours, because it is
related to SatanDisk anyway. I thought Satan was replaced by UltraSatan.
And that SatanDisk had disappeared. But you have the correct bookmark.

That helps a lot =)

Best regards,

Subject: Atari Party 2013 is 1 month away!
From: Bill Kendrick

Atari Party 2013 is one month away! I hope to see you at the public library here in Davis, on Saturday July 6th! Many of us will be there setting things up at 10am, when the library opens. The event officially starts at 12 noon.

http://www.newbreedsoftware.com/atariparty/2013/location/

If you're coming from out of town, and looking for a hotel or motel, here are a few links that you might find useful:

* Google Maps search for "hotel" near Davis
(note: check-in set for July 6th, the day of the event; change as needed)

http://goo.gl/maps/V4AAI

* "Hotels" pages on the DavisWiki and WoodlandWiki:

http://daviswiki.org/Hotels
http://www.woodlandwiki.org/Hotels

(Sadly, the West Sac. and Dixon Wikis don't have anything on their
"Hotels" pages; but they're wikis, so you can help fix that! ;) )

Want to help?

We're still in need of TVs (I need at least 3 more than I have, to set up all of the systems I'd like to bring), and volunteers to help 'usher' (hand out raffle tickets when people arrive, and help attendees -- or at least point them to someone else who can help).

I'm also considering buying a pair of game consoles (Atari 2600 & 7800, plus games & controllers) from a local comic book store to give away as prizes. They're asking $50, but I'll also need to buy some power supplies, since they have none.

However, I have $0 budget this year, since so far all donations have been give-away items. While this obviously isn't a deal-breaker, it's always cool to have actual Ataris to give away as prizes, so I thought I'd mention it, just in case anyone out here felt particularly charitable. :)

Thanks!
